March 1, 2016

Parents,

We hope the month of March finds our school families doing well! We wanted to inform you that we recently began working with Lordstown Village and a water testing company to test the water at both the Elementary and High School for lead. As tests are performed and results come in any water outlet with unacceptable levels will not be used until the source of the contamination is found and the water is deemed acceptable. We will be meeting with representatives from the Trumbull County Board of Health to review all of our results and receive the most up to date counsel on insuring our school water is safe and be proactive in all safety measures.

We will follow up with future communication to our school families when necessary and plan to have a public session to present any findings and corrective actions taken. Thank you to Lordstown Village, our School Facilities Staff as well as the Trumbull County Board of Health for helping our schools maintain a safe and healthy environment.

Respectfully,

Terry Armstrong

Superintendent
Lordstown Local Schools
