March 9, 2016

School Families:

I hope this letter finds you well. We wanted to follow up to the previous letter sent home concerning water testing we are doing at Lordstown Local Schools in an effort to be proactive in making certain our student and staff water supply is safe. We have been working with Lordstown Village and the Trumbull County Board of Health as we have tested samples throughout our buildings. Results received on March 8, 2016 indicated higher than acceptable levels of lead in areas of both buildings. It should be noted that no water fountains at either buildings tested at unacceptable levels...all water fountains are safe and remain in service to our students.

As we follow the direction of the Trumbull County Board of Health we immediately took sources that have tested with higher than acceptable levels out of service. These will remain out of service until the source of contamination is found and the water is re-tested and deemed acceptable. We will continue to work with the Board of Health, Lordstown Village and all appropriate agencies as we work to fix this issue. We will have a public meeting in the future to discuss the results of the testing, give a status report, and provide any other information about this issue. Thank you for your time and consideration.

Respectfully,

Terry Armstrong, Superintendent
Lordstown Local Schools
